

The EVT412-B batch composter is our latest creation for those wanting commercial grade equipment in a rotating batch style format at a *great price*.

A growing composting operation can quickly generate larger amounts of material than first expected, our batch composter is a great solution to the changing needs.

This solution is ideal for schools, food services, micro-breweries, urban gardens, offices, and many more applications.

AFFORDABLE COMMERCIAL GRADE IN VESSEL COMPOSTER

- Exceptional quality at an affordable price point
- Ideal for irregular input similar to a bin type system, but easier to manage
- Insulated drum allows for all season hot composting
- Automatic rotations mix and turn your compost without supervision, enabling faster composting than other batch methods at a lower labor cost – ‘set it and forget it’
- Efficient direct drive system with low energy requirements makes solar power feasible
- Improves site working conditions, appearance, and odors

A (4) cubic yard total input capacity is possible with the (2) 4' x 6' vessel chambers.

EXPAND YOUR COMPOSTING OPERATION EVEN IF YOUR TIME IS LIMITED

HOW IT WORKS The dual batch composter allows the user to add organic matter to one chamber over the course of several days until it is full, then fill the other chamber while the first one composts. When the second chamber is full it's time to empty the composted material from the first chamber so it can be filled again with fresh organic matter. The process continues like this, alternating between chambers.

Making compost fast has never been so easy.
